1.  (1) True(A derived class does not inherit the constructors of its base
             class.The reason is that this could lead too easily to the
             introduction of uninitialized derived class member errors.)
    (2)False(A 'has-a' relationship is implemented via composition.)
    (3)False(Faculty class may inherit some of Student class , while
             Course class may has nothing to do with Student class.)
    (4)True(Only members of **public** and **protected** base class are
             accessible to derived class)
    (5)True

2.
